

Ari-Theme Changelog

Version 1.1.2 - September 25th 2011

1. Fixed overlapping footer issue if theme has a very long title (by adding a 70% width to the footer div).
-

Version 1.1.1 - September 16th 2011

1. Removed hidden .ds_store (Mac) file in theme folder
-

Version 1.1 - September 1th 2011

1. Bugfix for searchform widget because the searchform widget was breaking the layout (had to delete unneeded closing div in line 99 of functions.php)
 2. Added Swedish and French theme translations to the languages folder
 3. Fixed images resizing for post thumbnails in Smartphone version (line 901 in style.css)
 4. Fixed broken layout problem for long titles and site description.
 5. Added permalink to post date so posts with no titles will still have a permalink.
 6. Deleted display:block for img tag in line 81 and 394 of style.css, also fixes styles for aligncenter, alignleft and align-right to fix images problems.
 7. Bugfix for post thumbnails so thumbnails can resize dynamically.
 8. Fixed styles to display ul and ol lists in comments.
 9. Deleted smoothscroll.js and the entire js folder to make the comments pagination work correctly.
 10. Added styles for comments navigation (style.css line 650 - 658)
-

Version 1.0.9 - August 26th 2011

- Bugfix for searchform widget because the searchform widget was breaking the layout (had to delete unneeded closing div in line 99 of functions.php)
 - Added Swedish and French theme translations to the languages folder
 - Fixed images resizing for post thumbnails in Smartphone version (line 901 in style.css)
-

Version 1.0.8 - August 21th 2011

- Added Google+ and Vimeo to the Ari social links widget, fixed bugs in the debugging mode and added target blank to the links so the social profiles can be opened easily in a new tab on mobile devices.
 - Bugfixes in comment form, therefore deleted code line „Comments Form Filters“ in functions.php and added display:block for input fields in style.css line 582.
 - Added support for post thumbnails (standard size 125px width).
 - Updated theme options page.
 - Added styles for sticky posts.
 - Bugfix for displaying smilies in posts.
 - Bugfix to resize logo image correctly within the left sidebar (important for viewing on smartphones)
-

Update Version 1.0.7 (9th March 2011)

- Bugfix in style.css line 386 to fix auto resizing smaller images to 100% content size.
-

Update Version 1.0.6 (5th March 2011)

- Included a clearing div after the content in loop.php to properly clear floated images on multiple page posts (recommended by wordpress.org theme review).
 - Updated the functions.php and deleted the deregister the WordPress bundled jQuery (as recommended by wordpress.org theme review).
 - Changed the footer link and text in footer.php.
-

Update Version 1.0.5 (8th Feb. 2011)

- Bugfix for Internet Explorer 8 auto image height problem.
- Fixed the code for the image logo option in header.php.

Update Version 1.0.4 (30th Jan. 2011)

- Updated the theme tags in style.css
- Updated styles in style.css for search result page.
- Small bugfixes in the template files header.php, footer.php, single.php, loop.php und functions.php after running the theme check plugin.

Update Version 1.0.3 (27th Jan. 2011)

- Included CSS-Styling for the default WordPress image gallery (see style.css line 591 - 614).
- Included extra style in stlye.css to fix the broken display of large pictures (over 150px width) in the right, secondary sidebar (see style.css line 219).
- Included an filter in functions.php (line 426) to disable the default include of css-styles for the WordPress gallery inside the body-tag.

Update Version 1.0.2 (20th Jan. 2011)

- Fixes on the Ari Social Link Widget code in functions.php (from line 246 - 255), beacuse empty Link icons still visible on firefox and IE browsers.

Update Version 1.0.1 (13th Jan. 2011)

- Fixed the Ari Social Link Widget code in functions.php and included the option to write individuel text for the different social links.
- Included a dark color theme option that can be selected on the theme option page. The CSS file dark.css can be found in the new folder »css«. To make the dark version work I also updated the header.php file and added line 18 to 20.
- Changed the screenshot picture.
- Updated the language files for the German translation de_DE.mo and de_DE.po in the »languages« folder.
- Updated the description text in style.css (from line 4).
- Included individual CSS styles for the jQuery thickbox in style.css.
- Included the changelog.txt file in the ari theme folder.

Version 1.0 (22th Dec. 2010):

- Ari Theme Release
-
